Helical gears - bevel helical gears - compact gears

Brevini EvoMax™

The Brevini EvoMax™ gearbox series is a further development of the PIV Posired 2 from Dana Motion Systems Deutschland. The development has incorporated over 90 years of application knowledge and customer feedback and the outcome is a series of highly reliable, efficient and economical products.
The development of the Brevini EvoMax™ gearbox series enabled the improvement in torque density, smaller physical envelope, higher efficiency, lower weight, noise and power consumption. Overall, the modular design of the Brevini EvoMax™ series gives sustainable and efficient transmission that minimize operating costs and maximize availability.

The Dana Motion Systems Deutschland ISO 9001:2015 quality assurance system for design, development, production, assembly, and aftersales service guarantees a uniformly high World-class standard.

Brevini EvoMax™

is an "intelligent" transmission concept with advantages to customers including:

- Short delivery times due to a high degree of standardization
- Cost-efficient gear selection for every application due to better torque distribution between sizes.
- High product quality resulting from a more robust construction
- Greater product flexibility enables a wide range of uses

Output torques

T_{2N} from 8000 Nm to 310000 Nm

Ratios

i_N = 4 to 500 for spur gears
i_N = 9 to 500 for bevel-helical gear units
i_N > 500 by combining planetary gear units.

Steady direction of load	reversing very rarely [4] or only slightly [5]	regular reversing operations

[1] Application factors apply to the following driving motors: electric motors, turbines and fluid power motors. When combustion engines are the driving force, inquiries have to be made.
[2] The lower table value is for single shift operation and for lighter applications, the upper table value is for continuous use and heavier applications.
[3] Design is in accordance with maximum torque.
[4] Rarely reversing: up to 3 reversing cycles in the lifetime with equal load in both directions.
[5] Slighly reversing: up to 3 million reversing cycles in the lifetime with a reversing load of up to 40% of the main directional load.

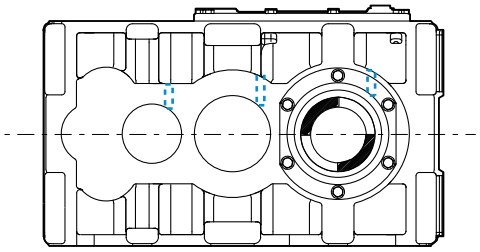
Attachment of sensors for control of rolling bearing

In order to avoid unplanned machine downtimes, we can offer the gearbox ready for gears and bearings condition monitoring. Starting with the oil temperature monitoring up to the monitoring of the rolling bearings.
We supply the threaded holes for the sensors as standard feature, and we can supply the sensor on request only.



E2H, E3H, E4H, E3B, E4B, E3C, E4C

Breather with filter
A breather with a filter can be used to prevent dust from entering the gearbox while the gear unit is cooling down.

Breather with wet filter
If the humidity is high, we recommend a breather with wet filter to prevent water vapor from penetrating the gear oil.

Temperature switch
To control the max. oil temperature there is the possibility to install a Temperature switch into the oil sump and get output signal when the temperature is above certain level.

Pressure switch
In case of a force lubrication or cooling unit there is the possibility to control the oil pressure with a pressure switch. If the oil pressure is below certain pressure a signal will stop the main motor of the gearbox.

E2H, E3H, E4H, E3B, E4B, E3C, E4C

PT100
To monitor the oil temperatures on the gearbox, and set up different level of attention at certain temperature, for instance start, alert and stop of the gearbox.

Manometer
In case of a force lubrication or cooling unit there is the possibility to have visual control the oil pressure with a manometer.

Oil level switch
With the oil level switch is it possible to control the min. oil level of the gearbox in case you use a heater.

Oil drain with ball valve
For an easy, safe and clean oil drain from the gearbox, we can deliver an oil drain with a ball valve

E2H, E3H, E4H, E3B, E4B, E3C, E4C

Oil filter, single, double
To increase the bearing lifetime is it possible in case of force lubrication / cooling to use an oil filter. We recommend a double switching filter for 24 hours operation.

Regulator for quantity of cooling water
In order to have a constant gear oil temperature with water cooling, we recommend the installation of a water regulator.
