Motion Systems

JMPVAZ - JMPVD Electronic remote voltage control unit

Technical Catalogue

January
2018

web edition

JMPVAZ joystick is a strong and compact device, whose ergonomic shape is handily organised.

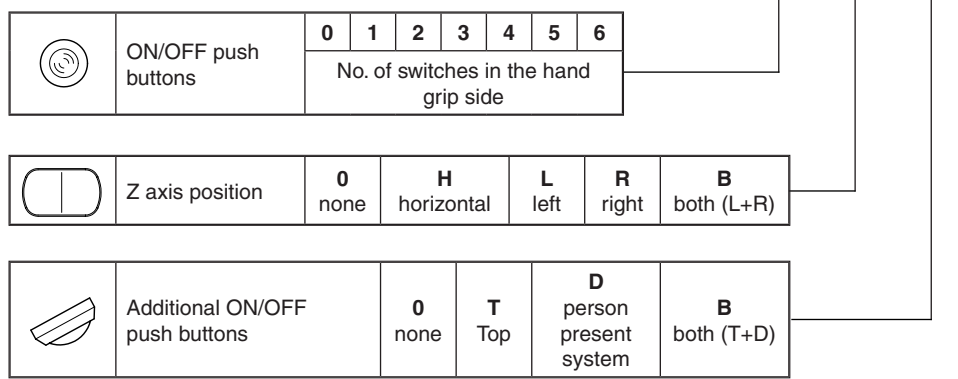

The person present system switch and many other remote control functions can be implemented and operated conveniently. It is developed to meet mobile machinery market requirements, where it is increasingly important to handle the power transmission supply with integrated remote control.

JMPVAZ is simple to fit and replace and is made up of a standard module with two proportional axes and a hand grip that can house several combinations of other proportional axes (up to 4) and ON/OFF outputs.

This joystick allows all the electronic features of ramp generator function, electronic flow adjustment, and dead band compensation (only for proportional axes).

ORDERING CODE

JMPVAZM800 **Y** **Z** **W**

ON/OFF push buttons (Y)
and Z axis position (Z)

Additional ON/OFF push
buttons (W)

Dimensions and electrical details

JMPVAZM8002RD

- 2 ON/OFF push buttons in hand grip side
- Z axis in right position
- person present system push button

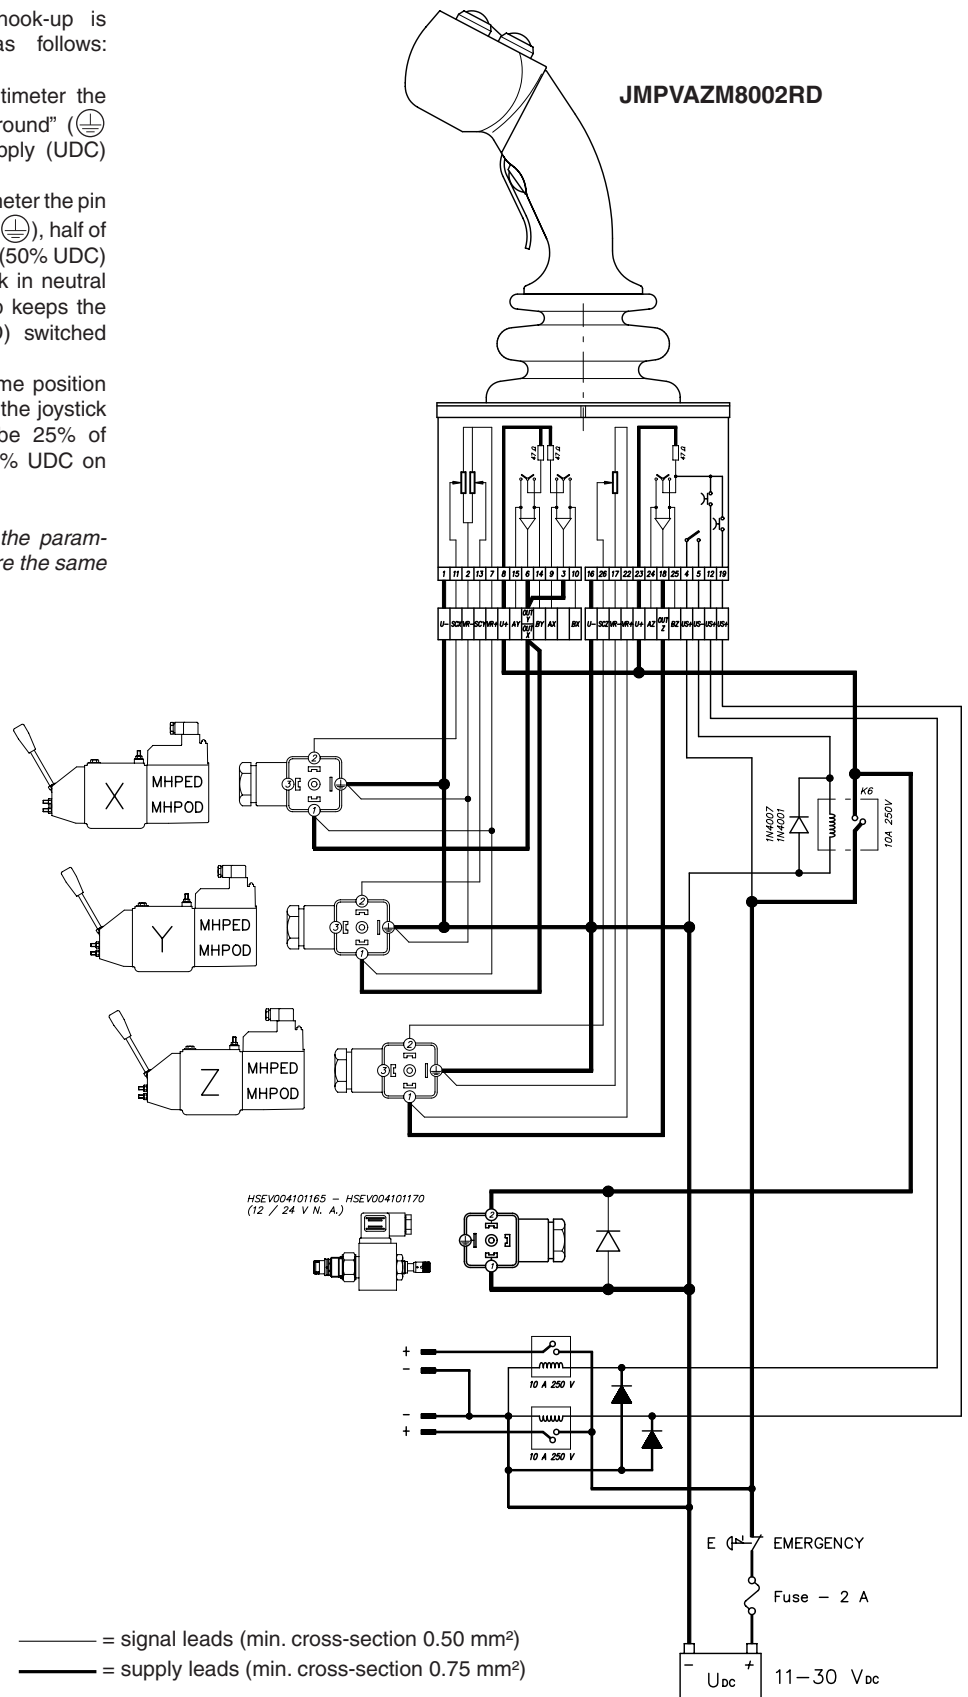

- | | | |
|---|---|---|
| 1 = Negative supply voltage | 11 = Signal control, X Axis | 21 = US- on-off output (max. load 30 mA) |
| 2 = Negative signal | 12 = (free) | 22 = Positive signal control |
| 3 = X axis output + | 13 = Signal control, Y Axis | 23 = Positive supply voltage |
| 4 = US+ (Safety system output) | 14 = "B" port, directional output (max. load 30 mA), Y axis | 24 = "A" port, directional output (max. load 30 mA), Z axis |
| 5 = US- (Safety system output) | 15 = "A" port, directional output (max. load 30 mA), Y axis | 25 = "B" port, directional output (max. load 30 mA), Z axis |
| 6 = Y axis output + | 16 = Negative supply voltage | 26 = Signal control, Z Axis |
| 7 = Positive signal control | 17 = Negative signal | 27 = (free) |
| 8 = Positive supply voltage | 18 = Z axis output + | 28 = (free) |
| 9 = "A" port, directional output (max. load 30 mA), X axis | 19 = (free) | 29 = (free) |
| 10 = "B" port, directional output (max. load 30 mA), X axis | 20 = US+ on-off output (max. load 30 mA) | 30 = (free) |

Electrical system

In order to verify if the hook-up is correct, please proceed as follows:

- 1) By touching with the multimeter the pin no. 1 and the pin "ground" (\oplus), the tension voltage supply (UDC) must be read.
- 2) By touching with the multimeter the pin no. 2 and the pin "ground" (\oplus), half of the tension voltage supply (50% UDC) must be read, with joystick in neutral position and if the hookup keeps the module (MHPED/MHPED) switched on.
- 3) With multimeter in the same position as per point 2, by moving the joystick the signal control must be 25% of UDC on one side and 75% UDC on the other side

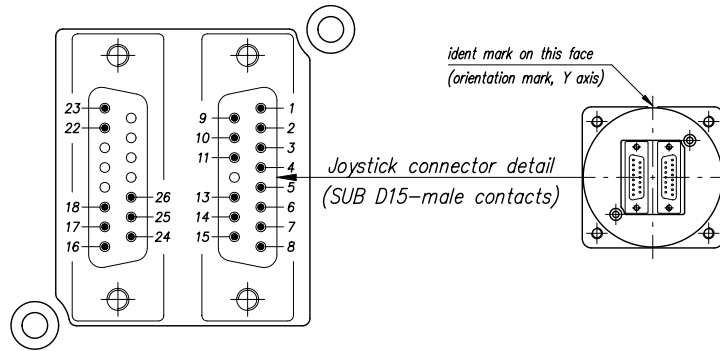

The methods of control and the parameters as per points 1), 2), 3) are the same for all kinds of our joysticks.

Dimensions and electrical details

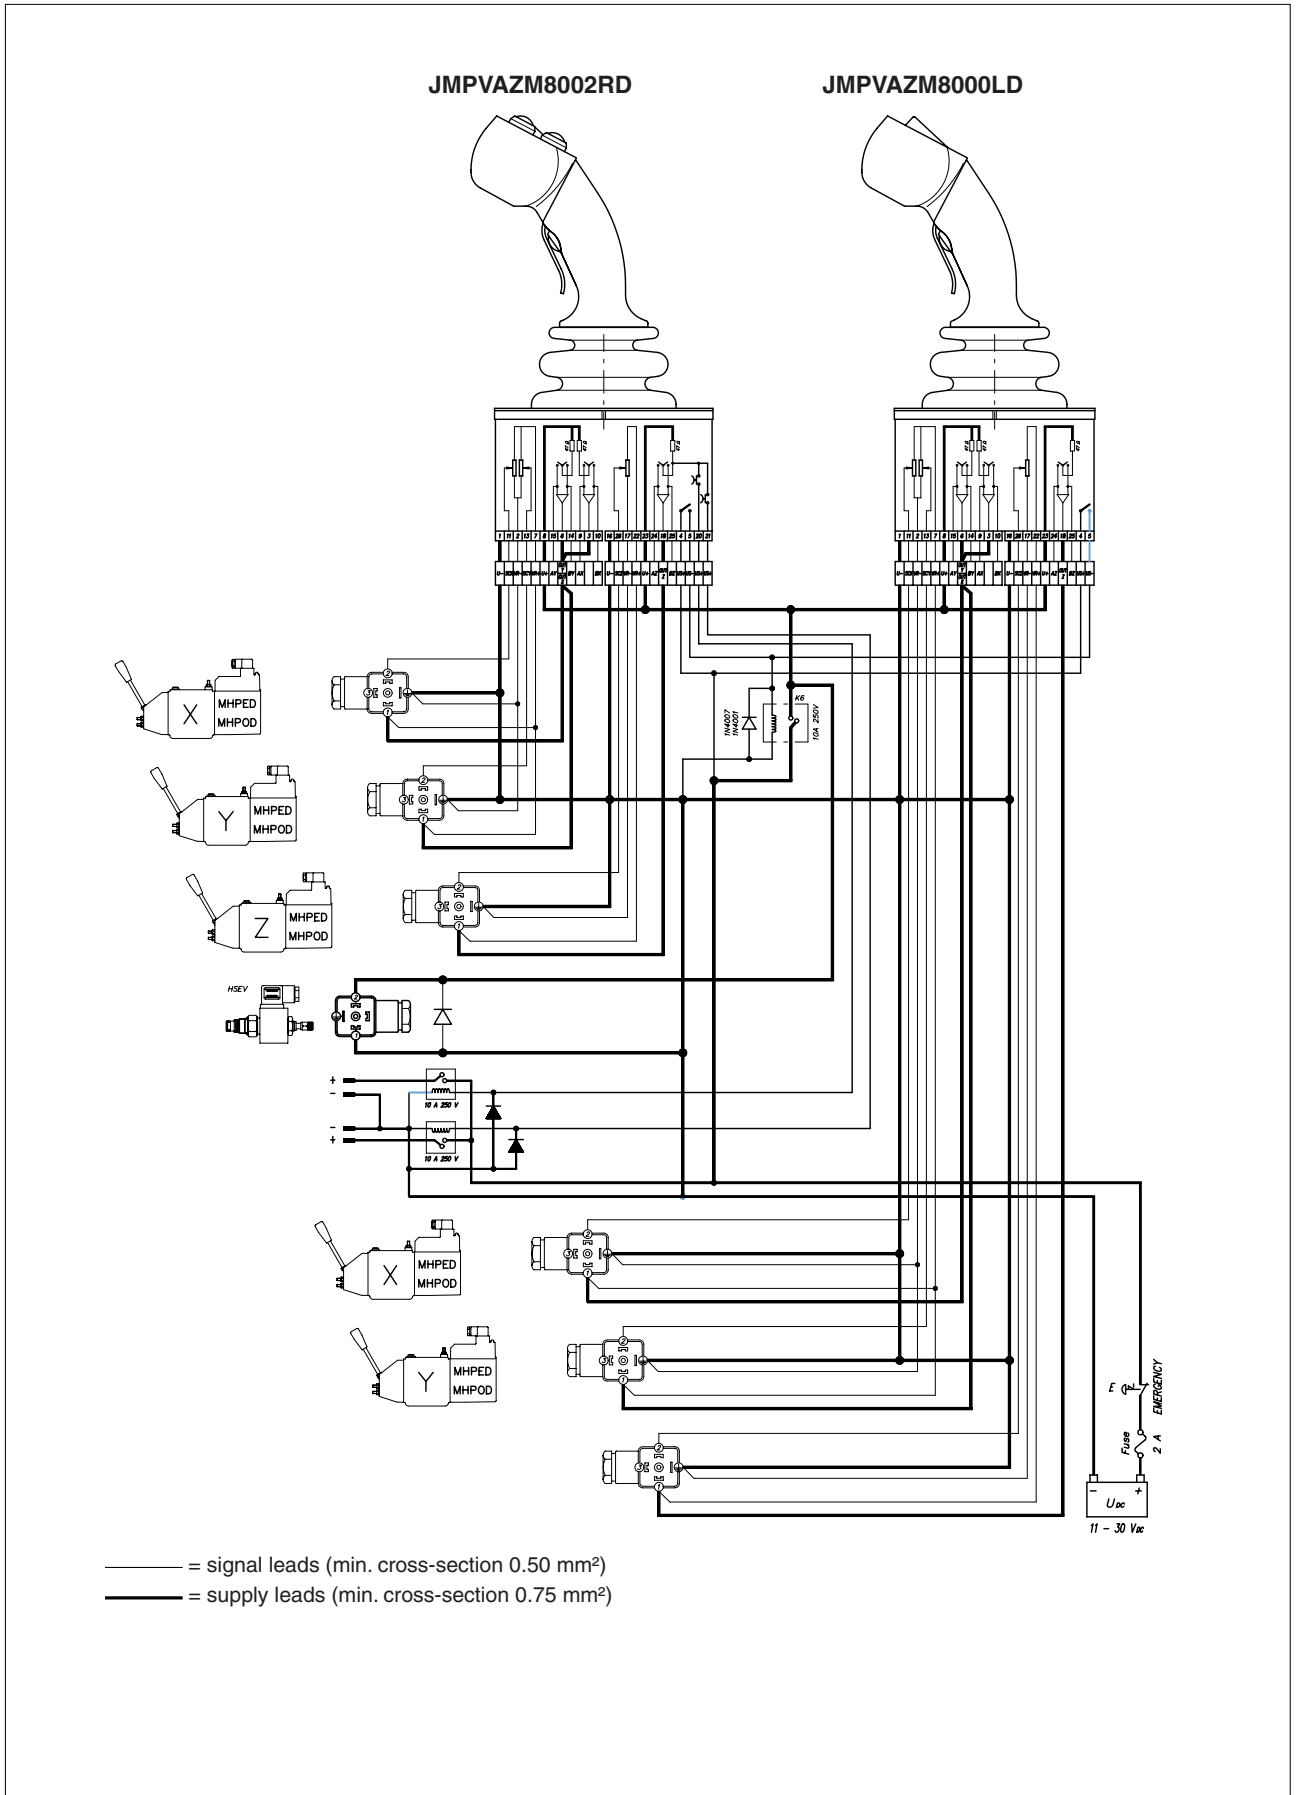

JMPVAZM8000LD

- NO push buttons in hand grip side
- Z axis in left position
- person present system push button
