\*: Under development

SH11CR series are a family of fixed displacement motors, bent axis piston design for operation in both open and closed circuit. SH11CR series motors are mainly intended for installation in mechanical gearboxes such as track drive and winches gear boxes.

The proven design incorporating the lens shape valve plate, the high quality components and manufacturing techniques make the SH11CR series motors able to provide up to 430 bar [6235 psi] continuos and 480 bar [6960 psi] peak performance.

Fully laboratory tested and field proven, these motors provide maximum efficiency and long life. Heavy duty bearings permit high radial and axial loads.

Flangeable valves, both for open and closed circuit, enable SH11CR series motors to meet the requirements of the most different types of applications.

**Simbology:**

<b>C</b>	N/bar [lbf/psi]	Load
<b>F<sub>ax max</sub></b>	N [lbf]	Axial pushing load
<b>F<sub>ax max</sub></b>	N [lbf]	Axial pulling load
<b>F<sub>q</sub></b>	N [lbf]	Radial load
<b>F<sub>q max</sub></b>	N [lbf]	Maximum permissible radial load
<b>J</b>	kg·m <sup>2</sup> [lbf·ft <sup>2</sup> ]	Moment of inertia
<b>m</b>	kg [lbs]	Weight
<b>n<sub>max</sub></b>	rpm	Maximum speed
<b>p<sub>max</sub></b>	bar [psi]	Maximum continuous pressure
<b>p<sub>peak</sub></b>	bar [psi]	Maximum pressure peak

<b>Q<sub>max</sub></b>	l/min [U.S. gpm]	Maximum flow
<b>q<sub>d</sub></b>	l/min [U.S. gpm]	External drain flow
<b>T<sub>k</sub></b>	Nm/bar [lbf.ft/psi]	Torque costant
<b>T<sub>max</sub></b>	Nm [lbf.ft]	Maximum torque at pressure continuous
<b>T<sub>peak</sub></b>	Nm [lbf.ft]	Maximum torque at pressure peak
<b>V<sub>g</sub></b>	cm <sup>3</sup> /rev [in <sup>3</sup> /rev]	Displacement
<b>P<sub>max</sub></b>	kW [hp]	Maximum power at p <sub>nom</sub>
<b>η<sub>hm</sub></b>	%	Mech-hyd. efficiency
<b>η<sub>v</sub></b>	%	Volumetric efficiency

**Hydraulic fluids:**

Use fluids with mineral oil basis and anticorrosive, antioxidant and wear preventing addition agents (HL or HM). Viscosity range at operating temperature must be of 15 ÷ 40 cSt. For short periods and upon cold start, a max. viscosity of 800 cSt is allowed, for different types of viscosity please contact Dana. Viscosities less than 10 cSt are not allowed. A viscosity range of 10 ÷ 15 cSt is allowed for extreme operating conditions and for short periods only.

**Temperature ranges:**

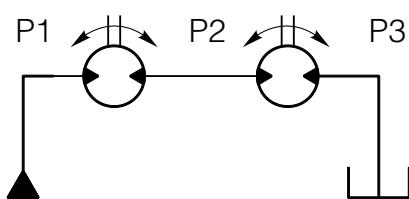

The operating temperature of the oil must be within -25°C ÷ 115°C [-13°F ÷ 239°F]. For applications with lower temperatures please contact Dana.

**Filtering:**

A correct filtering is essential for long and satisfactory life of axial piston units. In order to ensure a correct functioning of the unit, the max. permissible contamination class is 21/19/16 according to ISO 4406:1999.

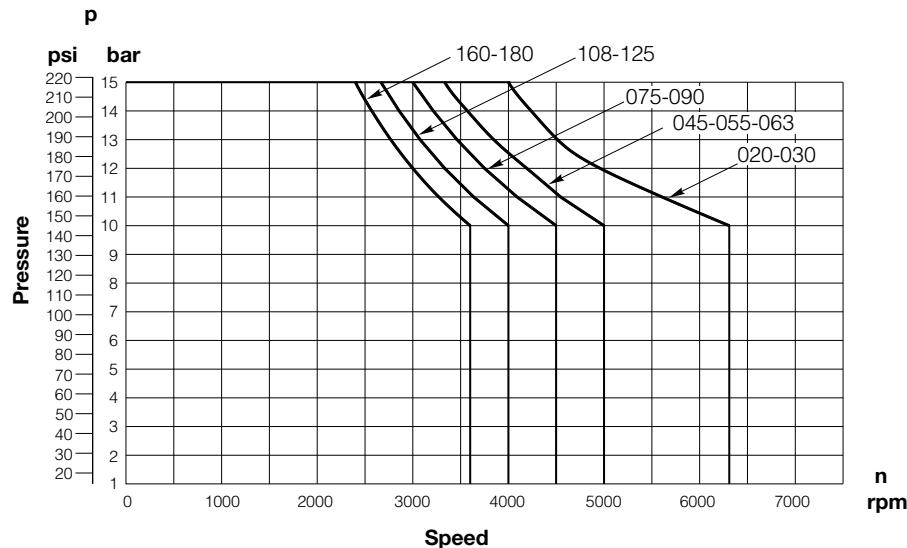

**Operating pressure:**

The maximum permissible pressure on pressure ports is 430 bar [6235 psi] continuous and 480 bar [6960 psi] peak. If two motors are connected in series, total working pressure P1+P2 has to be limited 700 bar max. [10150 psi].

**Case drain pressure:**

The service life of the shaft seal is influenced by the speed of rotation of the motor and by case pressure. It's recommended not to exceed the value of 10 bar [145 psi], at reduced speed please see the diagram. Instantaneous pressure spikes ( $t < 0.1$  sec) up to 15 bar [217.5 psi] are permitted.

**Output shaft:**

The service life of the shaft seal is influenced by the speed of rotation of the motor and by case pressure. It's recommended not to exceed the value of 10 bar [145 psi], at reduced speed please see the diagram. Instantaneous pressure spikes ( $t < 0.1$  sec) up to 15 bar [217.5 psi] are permitted.

**Seals:**

Seals used on standard SH11CR series axial piston motors are made by FKM seals (Fluoroelastomer). In case of use of special fluids, contact Dana.

**Minimum rotating speed:**

No limit to Minimum speed; if uniformity of rotation is required, speed must not be less than 50 rpm. In case of use of special applications, contact Dana.

**Installation:**

SH11CR motors can be installed in various position and directions; however, installation in vertical position with shaft towards upper is not allowed. These axial piston units have separated ports and drain chambers and so must be always drained. For further detail see at General installation guidelines.

**Flangeable valves:**

Flangeable valves are available for motors both in open and closed loop. For more information see the catalogue Axial Valves.

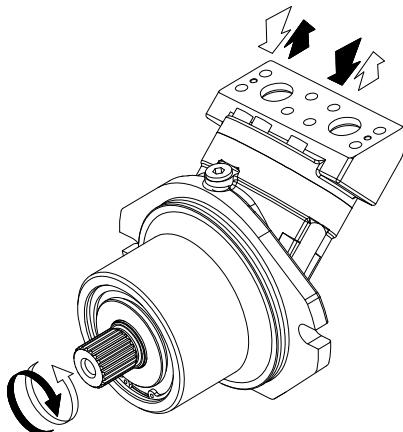

**Flushing valves:**

The motors can be equipped with flushing valves.

To mount the flushing valve on motors, it is necessary to use a special port cover. For more information see the catalogue Axial Valves.

**Relation between direction of rotation and direction of flow:**

The relation between direction of rotation of shaft and direction of flow in SH11CR piston units is shown in the picture below.

\* : under development

Theoretical values, without considering n<sub>hm</sub> and n<sub>v</sub> approximate values. Peak operations must not exceed 1% of every minute. A simultaneous maximum pressure and maximum speed not recommended.

#### Notes:

1) Approximate values.

2) Average values at 250 bar [3625 psi] with mineral oil at 45°C [113°F] and 35 cSt of viscosity.

The following alphanumeric codes system has been developed to identify all of the configuration options for the SH11CR series. Use the model code below to specify the desired features.

**All alphanumeric digits system of the code must be present when ordering.**

We advise to carefully read the catalogue before filling the ordering code.

**TZ:** With tachometer. Supplied with phonic wheel and sensor.

2-Channel differential-hall effect operating principle Sensor with dual-channel output (90°)

Power supply 8-32 VDC

Frequency 0-20.000 Hz

Operating temperature -40°C +125°C

Degree of protection IP67

Sensor connector Deutsch DT04-4P

Electromagnetic compatibility according to EN 60947-5-2

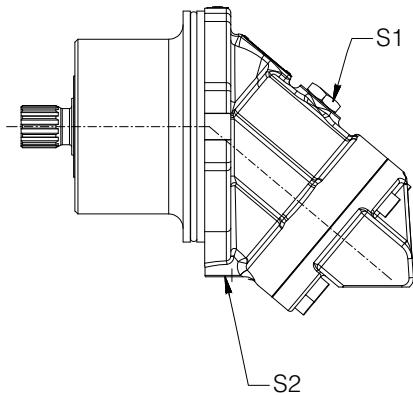

Resistance to shock and vibration in accordance with IEC 68-2-17 IEC 68-2-6
